

As of Monday, April 12, 2010 all of the W-2 monthly Webl reports will begin to use the WP geography for the March and future reports. This means if you open any of the W-2 monthly reports, the report will automatically get the WP equivalent of the W-2(ES) geography. Drilling will take you to the next level in the WP geography. Prior to the March reports, the old design of using the W-2(ES) geography is still used. We have made these changes to reflect the desire and need by workers and administrators to see the caseload they are actually serving. We hope this will make the W-2 reports more useful and meaningful in the months to come. If you need reports generated for March or later months to show the W-2(ES) geography instead of the WP geography, we have retained the W-2(ES) geography with the letters ES in front of the name of the geography object for these purposes. You can change the geography if you have edit capabilities in Webl.

We are also changing the W-2 monitoring reports (such as RP740TANF) to coincide with the WP geography.

We suggest that if you have problems with Webl reports such as access, contact Bonnie Nagel (bonnie.nagel@wisconsin.gov) or Maddy Scheer (Madelyn.scheer@wisconsin.gov).
